QUANTUM 338

## A&E SPECIFICATION

The DiGiCo Quantum 338 shall have 38 faders split into 3 worksurface sections of 12 faders, plus two master faders. Each of the three sections shall have 3 layers of 4 banks. All faders can be assigned to control any of the channel types. The console shall be capable of 128 input channels, 64 Aux/Sub-group Busses, a LR/LCR/LCRS/5.1 Master Buss, 24 VCA style or mute group style Control Group channels, 2 Solo Busses, and a 24 input x 24 output full processing Matrix. All processing paths shall have full processing including Tube emulation, Dynamic EQ and Multiband Compression. Tube emulation, Dynamic EQ and Multiband Compression shall be available on every channel and Buss on the console. All processing shall be internal and FPGA-Based.

An internal FX rack shall allow users to pick from 34 different FX. Up to 24 stereo FX can be added, up to 16 may be floating point reverbs plus any combination of delay/chorus/pitch/enhancer effects. An internal set of 24 32-band GEQs shall also be accessible. There shall be an additional processing Rack called the Spice Rack, allowing up to 8 mono effects. There shall also be 36 insertable Mustard Processing Strips. The position of these, and of inserts, shall be chosen from pre-processing, pre-EQ/dynamics, mid-EQ/dynamics, pre-fader or post-fader. 64 instances of nodal processing shall also be available. These shall allow EQ and dynamics to be applied to the aux node of a channel.

Three 17" (42cm) high-resolution, high-brightness TFT-LCD touch screens shall be provided to show the channel strips. There shall be a physical button to switch the view of the centre screen to show the master view. All three screens shall have their own dedicated hardware channel strip, allowing control over filters, EQ, dynamics and insert points. When viewing channels, each screen shall also have 7 integrated quick select buttons for reassigning the rotary encoders.

Each of the screens shall also have 2 rows of rotary encoders to control various channel parameters. The master section to the right of the centre screen shall have physical controls to allow control over some snapshot functions, control over basic Solo functions and a button to switch the view of the centre screen between the master view and channel views. There shall also be 4 layers of 10 user-assignable LCD macro buttons on the master section of the worksurface. The user shall also be able to program macros that can be triggered with fader movements, GPI, MIDI and keyboard functions. This master section shall also have a USB port. The console shall also have 70 full colour TFT displays including one for each fader and 10 macro displays. The front of the console shall have 2 pairs of headphone outputs, each pair having one 3.5mm and one 1/4" jack. It shall also have a 5V power only USB connection for charging devices.

The rear panel shall have 8 Mic/Line inputs and 8 line outputs, both of which shall be 'Ultimate Stadium' 32 bit pre amps and DACs. It shall also have 4 AES/EBU inputs (8 channels) and 4 AES/EBU outputs (8 channels), 6 sets of MADI I/O, giving up to 6 MADI interfaces or up to 3 redundant MADI interfaces at 48kHz or 3 interfaces at 96kHz, 2 DMI slots and inbuilt UB MADI (USB Type B audio I/O interface for recording and playback of up to 48 channels). It shall also have MIDI In, Thru and Out, 1 DSub37 GPI and 1 DSub37 GPO (16 inputs and 16 outputs), external Wordclock I/O, AES sync, 4 switched ethernet ports, 3 USB ports, a DisplayPort, an RS422 port and 2 redundant power supplies.

There shall be an Optocore option, providing either single or dual loop. Each loop shall give 504 additional audio paths at 48kHz and 96kHz. The Optocore connector type shall be chosen from HMA, OpticalCON or ST. The Optocore Mode shall be chosen from MultiMode or SingleMode. There shall also be a Waves Soundgrid option providing 64 inputs and 64 outputs to the SoundGrid Network at 48kHz and 96kHz.
